Listserv is enhanced by Rackspace CDN

Niel Hirjee - 2015-05-10 02:51

Listserv now links all images to a CDN so that when people view the email messages that Listserv sends out, the images embedded in the email load really fast. This new feature should help improve user experience.

Rackspace CDN makes it easy to take advantage of Akamai's best-in-class content delivery network (CDN) with over 200 edge locations on six continents. People reading email sent by Listserv will be able to view images embedded in the email faster than before because the servers which are geographically closest to the user will serve the image.

Faster load times

Serves your content at lightning speeds to keep your users happy and engaged

Industry-leading CDN

Akamai's best-in-class content delivery network

Origin protection

Stop worrying about traffic spikes and DDOS attacks. Rackspace CDN absorbs your traffic load and keep your website site lean and efficient.
